

Kason Stubbart

Provo, UT • 602-663-3768 • kgstubbart@gmail.com • linkedin.com/in/kason-stubbart-937015249 • kgstubbart.dev

Computer Science student at Brigham Young University with a minor in Astronomy, bringing full-stack development skills and research experience in computational modeling. Skilled in Python, Java, C++, and AWS, with proven leadership in managing multiple concurrent projects. Eager to design and ship scalable, well-tested systems on an engineering team.

SKILLS

Languages: Python, Java, C++, C, JavaScript, TypeScript

Technologies: React, Node.js, AWS (EC2, Lambda, SQS, DynamoDB), REST APIs, WebSocket, HTML/CSS, MySQL

Tools: Git, GitHub, Visual Studio Code, IntelliJ, PyCharm, PowerShell

WORK EXPERIENCE

Computer Science Research Assistant

08/2024 - Present

Human-Centered Machine Intelligence Lab at BYU

Advancing research on networks of power and poverty utilizing computational analysis with the goal of informing interventions to reduce poverty.

- Designed and validated a round-based token-exchange simulation and test suite, enabling reproducible experiments across 112 distinct network configurations to evaluate intervention strategies.
- Developed advanced visualization tools that enhanced experiment throughput by 55%.
- Presented findings at a research conference attended by over 600 professionals.

Instructional Design Assistant / Lead

02/2023 - 08/2024

BYU Independent Study

Led creation of educational materials, guiding multiple teams in developing course content and learning activities. I ensured the curriculum met goals, assisted with project management, and integrated technology to improve project efficiency.

- Led and contributed to 3–4 projects at a time, writing, editing, and organizing over 100 pages of material.
- Implemented a new AI tool, resulting in a 39% increase in efficiency and cost savings, driving improved project delivery timelines.
- Applied targeted design styles to lesson activities, resulting in a 30% increase in student interaction within 3 months.

PROJECTS

Exoplanet Atmosphere Analyzer

Developing a Python-based tool for analyzing exoplanet transmission spectra to characterize atmospheric composition. The project aims to identify common atmospheric gases and estimate planetary temperature from spectroscopic data.

Library Ace

Library Ace is an AWS-hosted web application that allows users to favorite a book, contributing to a community-driven ranking of most loved titles.

EDUCATION

Bachelor of Science in Computer Science • Brigham Young University

08/2022 - 04/2027

Minor in Astronomy • Brigham Young University

08/2022 - 04/2027

AWARDS & SCHOLARSHIPS

BYU Management Society Scholarship

VOLUNTEERING & LEADERSHIP

Church Missionary | BYU Rocketry | BYU Astronomy
